Experience

Software Engineer – Jackson Systems & Supply 2021–Present

Multi-Tenant SaaS Operations Platform (JSAdmin)

- Architected and maintained a multi-tenant Laravel + Vue.js SaaS platform powering eCommerce, CRM, subscription billing, and contractor operations.
- Established modular backend architecture using action-based service patterns to isolate billing, order lifecycle, refund logic, and onboarding workflows.
- Diagnosed and resolved production issues across payment and ERP integrations (Authorize.Net, CardPointe, ServiceTitan), tracing webhook failures, analyzing transaction edge cases, and hardening error handling and logging for reliability at scale.
- Led root-cause analysis for production incidents, tracing distributed failures across payment processors, queue workers, and third-party APIs to restore system reliability.
- Developed a 350+ route REST API secured with Sanctum authentication and role-based access control.
- Engineered configurable pricing and tax logic enabling contractor-specific markup, shipping rules, and catalog personalization across multiple storefronts.
- Implemented asynchronous processing with Laravel Horizon and 80+ queue jobs handling transactional emails, reporting pipelines, webhook ingestion, and catalog synchronization.
- Leveraged LLMs and agentic AI to accelerate feature delivery and enable rapid prototyping.

Configurable Quote Builder Platform (EC Quote)

- Designed and developed a multi-tenant quote generation system using Laravel and Vue.js, supporting multiple trade industry service domains through configurable workflows and data models.
- Modeled flexible relational data structures enabling equipment/service bundling across multiple use cases.
- Built secure quote sharing via hash-based links and automated email/SMS notifications for customer and sales engagement.
- Implemented dynamic tenant-specific UI configuration via JSON-based settings.

Embedded HVAC E-Commerce Platform (EContractor)

- Built a customizable Vue.js storefront deployed via custom web components across 200+ websites.
- Implemented advanced e-commerce features such as subscription management, dynamic pricing, promo codes, marketing emails, and a customizable theming engine using CSS variables.
- Designed version-based deployment architecture using Amazon S3 to enable controlled feature rollouts.

Technician Sales Application (Filter Fetch)

- Designed and built a mobile application using Ionic, Capacitor, Vue.js and Laravel for field technicians.
- Developed streamlined mobile UX for efficient checkout, enabling product purchases during service visits.

Software Engineer – Loke 2024–Present

Interactive map platform (app.getloke.com)

- Developed a Next.js + Mapbox web app optimized for SEO, performance, and social sharing.
- Implemented dynamic routing and automated sitemap generation, leading to 26k+ indexed URLs on Google and increasing organic discoverability and scalable content growth.
- Reduced hosting cost and scraping risk by shrinking Mapbox data payloads from ~10.8 MB to <2MB, enabling caching and API route protections.
- Implemented clustering, search and sorting features to improve spot discoverability.
- Managed automated deployments with GitLab + Vercel, enabling branch-based test workflows.

Skills

TypeScript, JavaScript, PHP, Laravel, Vue.js, Next.js, React, SQL, AWS, Docker, Git, Nuxt, C#, ASP.NET, Cypress, Vitest, PHPUnit, GitHub Actions, GitLab CI

Education

Indiana University Indianapolis – B.S. Media Arts & Science (Web Development)

2018–2021
